

Quiz 10

Instructions: Answer the questions with precise definitions. Your definitions should either be stated exactly as in the lecture or textbook, or be clearly equivalent to them. Having the “right idea” but not a precise formulation will not receive credit.

Problem 1. Under the general linear model $Y = X\beta + \epsilon$, what is the **least squared estimate** of β ?

Problem 2. Under the general linear model $Y = X\beta + \epsilon$, what are the **normal equations** and how do they relate to the least squares estimate?
